

LETTER TO ENGINEER

Dear Engineer

I am writing to discuss about my supportive and obliging idea which is known as the water supply bike which will be useful for families in third world countries like Africa, India, Bangladesh.

This invention would help encourage families to have a better quality of life by getting more purified water to drink in these poor countries. This will really change their life as at the moment, families are suffering because they have to travel miles away to get water and that making this product would make a difference, as it will increase the amount of speed from travelling one place to another and not just that, it will be faster journeys. Also, just so that you know, I have watched a clip about a five-year-old who has experienced this, and her name is Cheru and it was very devastating to hear about her story as they must drink contaminated water. This had helped me broaden my idea.

My invention is solar powered. The reason is because in these developing countries, there is a lack of electricity so I thought this would be the best option. I have created a anti – microbial purification system so that it can hold the contaminated water and that as it goes through a mesh, (like a piece of cloth) it would clean out the water. This is a great idea as this would prevent the contamination issue from the water source. As you can see in my drawing, that there is a lot of annotation added so more information is there about my invention.

I hope you enjoy reading about- my idea and you will think about making this product!.

Yours Faithfully,

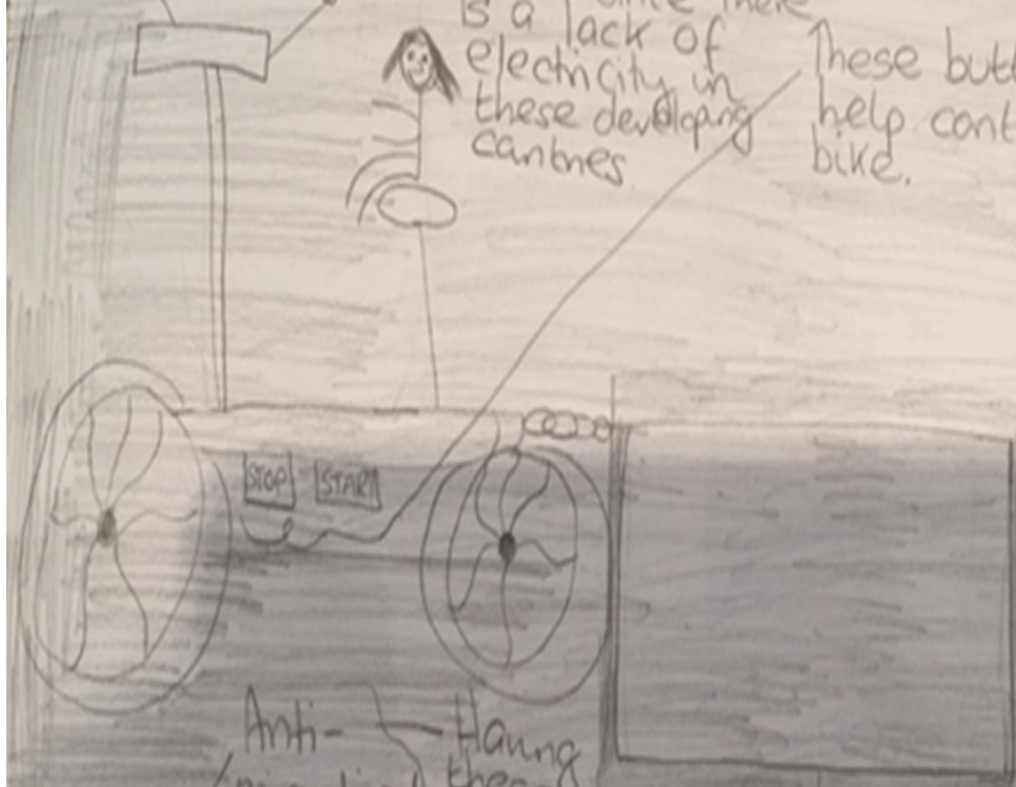

Kanika

This is a handle bar to steer which direction you are going.

Solar powered - This is the best option since there is a lack of electricity in these developing countries

The Water Supply Bike

These buttons are to help control the electric bike.

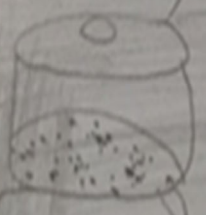

This would help encourage families to have a better quality of life by getting more purified water to drink in third world countries

Anti-microbial purification system

Having these

would stop the contamination issue from the water source

Trailer

Iodine tablet to dig out water

Like a mesh to purify the water

This helps carry water butts to increase speed and faster journeys
