

Dear engineers,

I am writing this letter to you about my design and why you should choose my design.

My design is a pipe that uses dirty water and cleans it so new, clean water can be used.

In this way water will be reused and not be wasted.

First the water is put through a hole and goes through sieves and water filters so that only clean water comes out and is available for the people to drink and use.

My design is made to help people specially who live in countries that can't afford clean water to drink and use.

My design is inspired by adverts on the TV that raise awareness to the audience about people who need clean water.

The material my design uses is mesh material.

In my design I am using the same material that is used in a sieve.

Especially people who live in small villages and can't afford clean fresh water, this design is made to help them.

Kind regards

Rabia
