

Dear Engineer,

I'm writing to you to explain my invention and why I think it would really change the world if you could create it. I call it ChampClamp: a small clamp which can cover webcams on devices such as iPads, iPhones, and much more. The reason I invented this is that, as you may have become aware from recent news, children are being spied on by hackers through their everyday home devices. A young girl was being talked to and spied on through a family ring camera in her bedroom, which terrified her family. As a result, I invented this clamp to help prevent any potential hackers from accessing webcams in homes and harassing people. As I mentioned before, these clamps can be fitted on any device; they come in all different shapes, colours and sizes. With these clamps in the market, parents can ensure that their household remains a safe and secure place for their children. If everyone begins bringing these clamps into their homes and inserting them onto their devices, hackers may then resign from trying to harm and harass small children if they are not being affected by it. This revolutionary invention may be small in size, but big in value, and can keep small, innocent, naïve children feeling safe and unharmed! Soon, there will be these amazing clamps in everybody's home - but only with your appreciated help and co-operation! Please consider bringing this revolutionary invention to life, as it would have a huge impact on everybody's safety with a simple insert of the ChampClamp!

Hope you enjoyed reading and consider creating the ChampClamp.

Stay Creative!

Rima, Year 8

MY INVENTION

29/6/20

THE CLAMP which can block the camera, so any potential dangerous people trying to spy on you can't see you.

You press on these handles to open the clamp, and then insert it on top of your device's camera.

This clamp can come in all shapes, colours and sizes.

IPAD (this is just an example, keep in mind that the clamp can be used on any device e.g. phone, laptop, etc)
